Example for lastpage

This example demonstrates the use of package
lastpage, v1.2m as of 2015/03/29 (HMM; JPG).
The package takes no options.
For more details please see the documentation!

To hide the $\overset{\texttt{keys}}{\text{I}}$ use option `final` instead of `draft` with the showkeys package (or remove the package call from the preamble of this document).

Hyperlinks or not: If the hyperref package is loaded, the references are also hyperlinked:
Last page's name (LastPage): $\overset{\texttt{LastPage}}{\text{IV}}$

If the hyperref package is loaded, but the hyperlinks of the references shall be suppressed, `\pageref*{...}` can be used:
Last page's name (LastPage): IV

Trademarks appear throughout this example without any trademark symbol; they are the property of their respective trademark owner. There is no intention of infringement; the usage is to the benefit of the trademark owner.

Tip: Use *logical page numbers* for the display of the pdf!
(In Adobe Reader XI (11.0.10): Edit > Preferences (Ctrl+k) > Page Display > Page Content and Information > Use logical page numbers.)

If you are more ambitious in respect to your aims with this package, you might want to have a look at the pageslts package:
`https://www.ctan.org/pkg/pageslts`.

Save per page about $200\,\text{ml}$ water, $2\,\text{g}$ CO_2 and $2\,\text{g}$ wood:
Therefore please print only if this is really necessary.
I do NOT think, that it is necessary to print THIS file, really
(at least not after this page)!

The page (`\thepage`): I

Last page's name (LastPage): $\overset{\texttt{LastPage}}{\text{IV}}$

The page (\thepage): II

Last page's name (LastPage): IV^LastPage

The page (\thepage): III

Last page's name (LastPage): IV^{LastPage}

The End

The page (\thepage): IV

Last page's name (LastPage): IV̲ LastPage
